

Eric C Chiruka

About me

Master of Computing graduate (pass) with a strong drive to learn new technologies. I am looking for new technical graduate role that will challenge me to improve my programming skills further. I have a proven ability of being a fast learner of new technologies as evident by my recent academic achievements.

In my spare time enjoy running, trying out FOSS software such as GNU/Linux distros; tiling window managers such as AwesomeWM and EXWM. Occasionally I collect keyboards.

Education

2016 – 2020
MComp Computer Science
University of South Wales

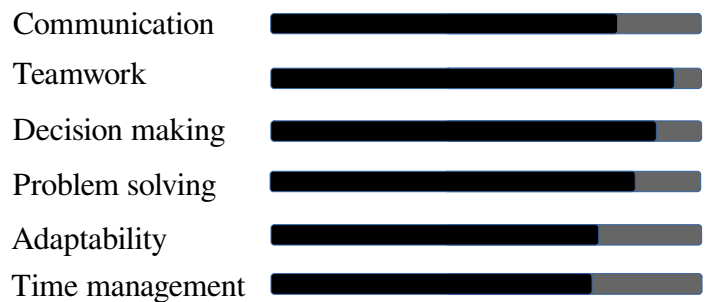

During my time at USW I gained a particular interest in academic research methodologies, with emphasis in robotics and FOSS.

My interest in robotics began when I was introduced to the Ev3 robot during my third year of study. The Ev3 had to Robotrace a track, whilst reading a morse code message using reflected light intensity to read a morse code message underneath it.

In my fourth year of study I got to play the Arduino nano in an assignment that was basically a micromouse contest.

My interest in FOSS began when I did the operating systems concepts module in second year that introduced me to GNU/Linux. Since then I've been distro hopping, scripting and ricing my desktop.

Soft Skills

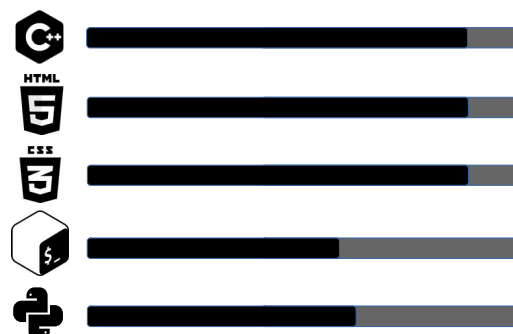

Experience

Working here, I have worked to improve my team working skills as well as communication skills. These are transferable skills I believe could lead well into my future career. Working in these environments, I have gained insight into the day to day practicalities of a professional environment such as interpersonal skills, punctuality and never being afraid to ask questions.
